# Syn·er·gy

*(sin'er-je)* n. pl. Cooperative interaction among  
groups so that their combined effect is greater  
than the sum of their individual effects.

# SOLUTION™

For the active client, the Solution™ has a contoured, wrap-and-lift base designed with high density, high resiliency (HR) polyurethane foam that redistributes weight away from areas vulnerable to skin breakdown. This, along with a twin-cell gel well, viscoelastic foam layer, 4-way stretch top fabric, pliable urethane fluid resistant inner liner and non-slip bottom, offers pressure management, positioning and long lasting comfort.

# SPECTRUM™

The Spectrum™ takes the wrap-and-lift base design to the next level by providing an extra-deep well and allowing the provider to choose the medium that offers the best pressure management and comfort for the individual client. Choices available are: the lightweight twin-cell gel or the viscoelastic foam insert. This system provides comfort as well as excellent pressure management and positioning.

# Structure™

The Structure™ expands even further on the wrap-and-lift base design by combining a choice of pressure management insert – the lightweight twin-cell gel or the viscoelastic foam – with modular positioning components. This allows the provider to deliver client-specific customization for maximum pressure management, unparalleled positioning, and incredible comfort.

# SIAPPLICITY

The Synergy® Simplicity is a cushion that offers a tremendous amount of comfort plus the health benefits of moderate pressure management and positioning.

- High density polyurethane foam construction for long lasting comfort
- Exclusive wrap-and-lift design for pressure management and proper positioning
- Coccyx and sacral relief for added protection
- Four-way stretch fluid-resistant cover for added comfort and protection
- Non-slip base to help maintain proper position on chair
- Low profile to maintain a low seat to floor height

## BENEFITS

- Engineered to redistribute weight away from areas vulnerable to skin breakdown
- Designed to allow proper circulation flow to lower extremities
- Built to last and meet the needs of a diverse range of clients
- Made from the finest materials to deliver world-leading Quantum® Rehab quality
- Interfaces with all Quantum® Rehab Synergy® seating solutions
